

Hands Free Mobile Desktop for Ultra Mobile PCs

Today, using an Ultra Mobile PC and wireless equipment like bar code scanners and laser distance meters can be a challenge. This is especially true when your joggling using a hand-held device and entering data into a computer all at the same time. JMA Technology has developed a lightweight, water-resistant mobile desktop for the Ultra Mobile PC. The mobile desktop is designed to provide the user easy viewing of the display and easy access to the application interface without joggling the computer and a hand-held device. The unique design of the mobile desktop will increase a user productivity on most projects.

The mobile desktop is designed to provide the user of a UMPC their third hand. This is accomplished by constructing the case with an open side to access controls and inventive use of straps and foam to position the UMPC perpendicular to and away from the body. This configuration allows easy viewing of the entire UMPC screen and easy access to the controls.

The mobile desktop is designed with four attachment points which allow for large number of different configurations. When the shoulder strap is worn diagonally behind the back, the case is attached using three (3) points, this allows either left or right-hand operation and easy access to the touch screen for hand writing or data input.

The UMPC is attached to a foam and plastic bump case by a shock cord. The case is manufactured to provide a stable writing platform and increase airflow to the unit. The bump/inner case is fastened to the outer fabric case with two standoff and screws. This inner case provides not only protection for the UMPC but ease of use and a comfortable fit while working. The attachment cords provide complete access to the UMPC controls and display but are part of the impact protection system for the unit. The articulated cover flap is design to be thin and light weight while at the same time providing an impact protection for the display screen of the UMPC.

The mobile desktop also has an integrated stylus holder, business card pocket and an accessory pocket. This accessory pocket is sized for carrying different styles of external battery packs.

Currently, the mobile desktop is designed to fit Samsung Q1 family and TabletKiosk i72xx product line of UMPCs. Additional Ultra Mobile PCs are being added periodically.

The Hands Free Mobile Desktop color schemes are designed to provide a professional look to the carrying case while providing high visibility during operation. The Nylon lining colors have been selected to give high visibility when in use.

Suggested Retail Price is \$140.00 US. All prices are in US Dollars. Freight is F.O.B. Houston, Texas.
